

ALULA Lighting provided lighting design for the Osler Bluff Ski Club - Clubhouse Enhancement project in collaboration with architectural firm Williamson Williamson. The project included a complete renovation and expansion of the Clubhouse and other associated spaces.

The lighting design of the Clubhouse space was essential to the apres-ski experience during ski season. With the intricate Douglas Fir acoustic ceiling in this highly visible space, indirect (uplighting) and decorative lighting were utilized to the fullest to create an intimate and warm ambiance of the space, along with strategically placed architectural lighting to highlight interior features such as the grand fireplace, as well as lighting for the various required tasks in this space, such as food and bar services.

The renovation project also included other spaces associated with the clubhouse such as reception, members lounge, child minding, and multipurpose rooms.
